## How to Cut Pockets in Adhesive-Backed Tool Foam with a Hobby Knife
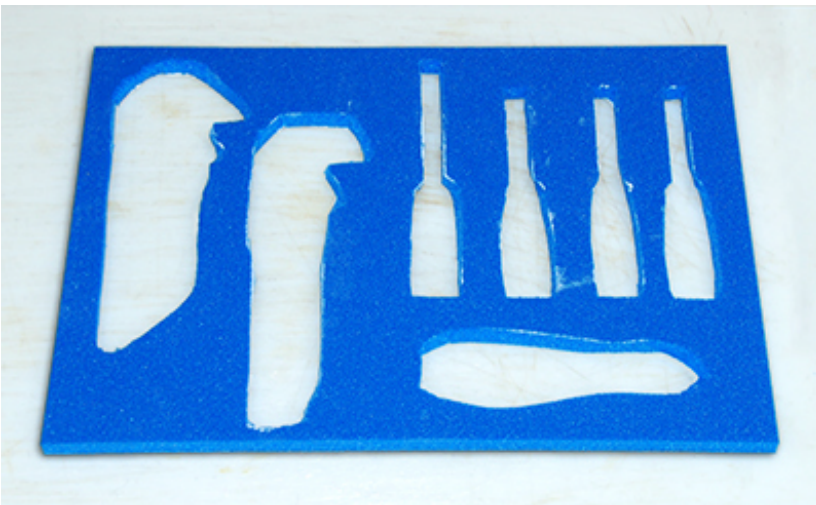

Arrange your tools on the thicker sheet of foam.

Use a marker to trace the tools.
We used a liquid chalk marker as shown,
but neon dry-erase markers also work well.

Cut through the foam and paper backing with a hobby knife.
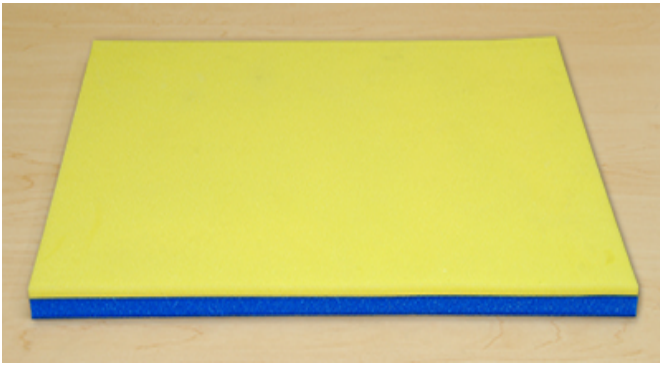

Add finger pockets, if desired.

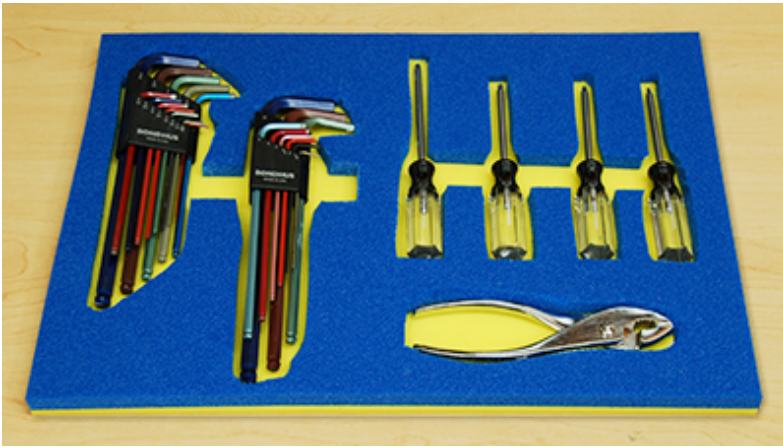

Test fit the tools.

Remove paper backing from foam.

Press the layers together firmly.

The finished result:

Helpful Hints

The adhesive bond will improve over time. For best results:

• Assemble when foam is at room temperature or warmer.
• Stack weight on foam for 30 minutes for best initial bond.
• Remove any dust or oil before assembly using paint thinner, acetone, or an all-purpose cleaner.
